Hook Bike Stand

Design Note Design Studio

The broad strip of metal forming Hook's structure gives it a robust appearance, but its narrow width makes it appear smaller when viewed from the side. Available in eye-catching orange, pastel blue or light grey, the colour choice can make the cycle stand more visible or enable it to melt seamlessly into the background.

Materials and surface treatments

Steel

Nola uses high-quality steel with good strength in our products. Steel rusts if left untreated and must therefore be surface treated.

Zinc powder primer

It's a thermosetting epoxy powder coating primer that can be applied on several type of metal substrates such as aluminium, steel or galvanised steel. This primer has a robust curing window, allowing excellent inter coat adhesion in direct fired ovens and gives very good edge coverage and superior corrosion protection.

Powder coating

Powder coating is a coating that is applied as a free-flowing, dry powder. Unlike conventional liquid paint, powder coating is usually applied electrostatically and then cured under heat or with ultraviolet light. The result is an even, hard-wearing coloured surface with the desired gloss level.

Assembly and placement**Surface mount**

Can be bolted above ground, to the floor or to a cast-in-place foundation. Bolts not included.

Maintenance**Powdercoated steel**

Products that are powder-coated can be touch-up painted with alkyd paint.
