

# Solaris Planter

## Product Overview

### Solaris Planter

Solaris Planter is made of steel and pre-treated with iron phosphating before being surface treated with a thermosetting modified epoxy powder, providing a very smooth levelling and substrate wetting, excellent corrosion protection and adhesion with the topcoat. The planter is then powder coated.

### Maintenance

Any paint damage can be touched up with alkyd paint.

### Assembly

Solaris is free-standing but can be attached to a substrate if needed. Either by drilling holes in the bottom for optional anchoring or some of the four drainage holes can be used for attachment.

### Specifications

- Ö13-63/50 Solaris Planter (500 x 500 mm)
- Ö13-63/60 Solaris Planter (600 x 600 mm)
- Ö13-63/70 Solaris Planter (700 x 700 mm)
